What if?

Imagine there's some music on

How do you feel about the music?

Stupid question!

Depends on what the music is!

```
if (music == samsMusic) {  
    console.log("Oh no it's 0's indie again")  
}  
else if (music == noMusic) {  
    console.log("Arh, peace and quiet")  
}  
else {  
    console.log("Nice and noisy")  
}
```

if (something) {

**// do this
}**

else if (something else) {

**//do this
}**

else {

**//if nothing else matched do this
}**

```
if (music == samsMusic) {  
    console.log("Oh no it's 0's indie again")  
}
```

== ?

==

**checks if the values are
equal regardless of type**

===

**checks if the values and
type are equal**

!=

**checks if the values are not
equal regardless of type**

!==

**checks if the values and
type are not equal**

```
if (1 === '1') {  
  console.log(true)  
}  
else {  
  console.log(false)  
}
```

What is
logged?

```
if (1 !== '1') {  
  console.log(true)  
}  
else {  
  console.log(false)  
}
```

What is
logged?

```
if (something) {  
    // do this  
}  
  
else if (something else) {  
    //do this  
}  
  
else {  
    //if nothing else matched do this  
}
```

Create a **variable** called **age**.
Write an **if** statement that
logs "Yes I can serve you" **if**
age is greater than 17 and
else logs "You aren't old
enough".

**And onto the next
thing**

```
if (place == "Manc" && weather == "Sunny") {  
    console.log("Check again")  
}  
else if (place == "Manc" && weather == "Rain") {  
    console.log("Obvs")  
}  
else {  
    console.log("What it isn't raining?")  
}
```

Take your if statement and add a variable called country.

Now check if age > 17 and country == "UK"

Or not?

```
if (samTurnsUp || danTurnsUp) {  
    console.log("You can have laptops")  
}  
  
else {  
    console.log("What do we do now?")  
}
```

Where are the equals?

```
let name == "Sam"
```

```
if (name == "Sam" || name == "Dan") {  
    console.log("Your name is Sam or Dan")  
}
```

```
else {  
    console.log("What is your name?")  
}
```

```
let name == "Sam"
```

true **or** **false**

```
if (name == "Sam" || name == "Dan") {  
    console.log("Your name is Sam or Dan")  
}  
  
else {  
    console.log("What is your name?")  
}
```

I could even write

```
if (true || false) {  
    console.log(true)  
}  
else {  
    console.log(false)  
}
```

Inside the brackets we have

(expressionToBeEvaluated

logical operator

expressionToBeEvaluated)

It's only logical

And

True and True →

True and False →

False and False →

And

True and True \rightarrow True

True and False \rightarrow False

False and False \rightarrow False

Or

True or True →

True or False →

False or False →

Or

True or True \rightarrow True

True or False \rightarrow True

False or False \rightarrow False

If we list all the integers below 10 that are multiples of 3 or 5, we get 3, 5, 6 and 9. The sum of these multiples is 23.

Find the sum of all the multiples of 3 or 5 below 1000.
